

Sema

The Semantic Layer for Enterprise AI

Governed, explainable text-to-SQL analytics — trust the answer.

What is Sema?

Sema connects to your data warehouse, infers what every table and column means, and lets business teams ask questions in plain English. Every answer ships with the SQL it ran, the semantic graph it traversed, and a cryptographically signed evidence pack — so answers are explainable, governed, and audit-ready from day one.

Highlights

- 40+ database connectors with sandboxed, read-only execution.
- Conversational query with auto-visualization and clarifying questions.
- Ed25519-signed Evidence Packs + shareable read-only audit links.
- Governed checks, alerts, and an immutable signal registry.
- RBAC, column masking, and an append-only audit log — on by default.
- India DPDP Act 2023 aligned · SOC 2 program · GDPR-ready.
